

Proposed Solution

Date	02 November 2025
Team ID	NM2025TMID07694
Project Name	Educational Organisation Using ServiceNow
Maximum Marks	2 Marks

Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement	The current Educational Organisation Using ServiceNow requires extensive manual data entry for student admissions and progress tracking, leading to errors in grade calculations, inconsistent data, and inefficient processes.
2.	Idea / Solution description	Implement automated client scripts and workflows in ServiceNow to auto-populate student details, calculate grades and percentages, auto-fill addresses using pincode, and streamline admission processes with status tracking.
3.	Novelty / Uniqueness	Uses native ServiceNow capabilities to create a fully integrated Educational Organisation Using ServiceNow with real-time automation, reducing manual intervention while maintaining data accuracy and process efficiency.
4.	Social Impact / Customer Satisfaction	Reduces administrative workload for school staff, ensures accurate student results, and improves the overall educational administration experience for both staff and students.
5.	Business Model	Saves operational costs by reducing manual labor hours, minimizes errors that could lead to administrative rework, and provides a scalable platform for educational institutions.
6.	Scalability of the Solution	The solution can be extended to include additional features like fee management, attendance tracking, parent portals, and integration with other educational platforms for comprehensive institution management.

Conclusion:

The Educational Organisation Using ServiceNow project addresses critical challenges in educational administration by automating key processes that are traditionally manual and error-prone. By implementing automated data population, grade calculations, and workflow-driven admission processes, we significantly improve data accuracy, operational efficiency, and user experience for school administrators. This solution not only streamlines daily administrative tasks but also provides a foundation for future enhancements that can transform how educational institutions manage their operations. The successful implementation of these automation features in ServiceNow creates a robust, scalable platform that can adapt to the evolving needs of educational environments.

Solution Description:

The Educational Organisation Using ServiceNow automates student data management through custom client scripts and configured workflows in ServiceNow. Key features include auto-population of student details when admission numbers are selected, automatic calculation of totals and percentages with result determination, pincode-based address auto-completion, and structured admission workflows with status tracking. These automation features reduce manual data entry, eliminate calculation errors, ensure data consistency, and streamline administrative processes. The solution leverages native ServiceNow functionality, making it cost-effective and easily maintainable while significantly enhancing the efficiency and reliability of educational administration.
