Step-2: Brainstorm, Idea Listing and Grouping

2

Brainstorm

Person 1

Automate student grade calculation and result generation.

Use client scripts to auto-fill student details during admission.

Person 2

Implement pincode-based address auto-fill for student records.

Create dropdown menus for standard fields like grade and school area.

Person 3

Design a process flow for admission status.

Use number maintenance for automatic student ID generation.

Person 4

Develop client scripts to disable fields that shouldn't be edited manually.

Auto-calculate total marks and percentage based on subject scores.

3

Group ideas

Automation of Data Entry & Calculation

Auto-fill student details using reference fields.Auto-calculate total, percentage, and result.Pincode-based address auto-fill.

Process & Workflow Streamlining

Admission process flow with status tracking.Automatic student ID generation.Disable manual editing of auto-calculated fields.

Standardization & Data Integrity

Use choice lists for standard data (grade, school, area, etc.).Form design optimization for better user experience.

Step-3: Idea Prioritization

4
