

## Project Design Phase-II

### Solution Requirements (Functional & Non-functional)

|               |                                           |
|---------------|-------------------------------------------|
| Date          | 02 November 2025                          |
| Team ID       | NM2025TMID07694                           |
| Project Name  | Educational Organisation Using ServiceNow |
| Maximum Marks | 4 Marks                                   |

#### Functional Requirements:

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task)                                                                                                                                        |
|--------|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FR-1   | Student Data Management       | Create student master records in Salesforce table<br>generate unique admin numbers automatically<br>manage student personal and contact information                       |
| FR-2   | Admission Process             | Track admission applications through status workflow<br>Auto-populate student details from master records<br>Manage admission status (New, In Progress, Joined, Rejected) |
| FR-3   | Academic Progress Tracking    | Record subject marks for students. Calculate total marks automatically. Calculate percentage and determine results                                                        |
| FR-4   | Address Automation            | Auto-fill address fields using pincode<br>Map pincode to mandal, city, and district<br>Validate address data consistency                                                  |
| FR-5   | Form Management               | Design optimized forms for all tables<br>Configure field layouts for better usability<br>Implement field protection for calculated values                                 |
| FR-6   | System Automation             | Implement client scripts for auto-calculation<br>Configure number maintenance for IDs<br>Set up process flows for admission tracking                                      |

## Non-functional Requirements:

| NFR No. | Non-Functional Requirement | Description                                                                                         |
|---------|----------------------------|-----------------------------------------------------------------------------------------------------|
| NFR-1   | Usability                  | The interface should be intuitive for school staff with minimal training required                   |
| NFR-2   | Security                   | Only authorized users can modify student records and academic data                                  |
| NFR-3   | Reliability                | The system must accurately calculate grades and maintain data integrity                             |
| NFR-4   | Performance                | Automated calculations and data population should happen in real-time without delays                |
| NFR-5   | Availability               | The system should be accessible during school operating hours for administrative tasks              |
| NFR-6   | Scalability                | The system should handle increasing student data and multiple users without performance degradation |
| NFR-7   | Data Accuracy              | Automated calculations must be 100% accurate with proper validation checks                          |
| NFR-8   | Maintainability            | The solution should be easy to update and modify as educational requirements change                 |
